

ALOK GARG

Production Support / MFT Operations Engineer

📞 +91 8306718442 ✉ alokgarg003@gmail.com 🔗 [linkedin.com/in/alok-garg-561a16196/](https://www.linkedin.com/in/alok-garg-561a16196/) 🐙 github.com/alokgarg003

Professional Summary

Production Support Engineer with hands-on experience in enterprise Managed File Transfer (GoAnywhere MFT) and Linux-based file workflows. Skilled in triaging high-volume alerts, resolving issues within SLA, improving MTTA/MTTR, and creating clear SOPs and runbooks. Designed a Python + Streamlit insights tool that analyzes ~2 years of ServiceNow incidents, classifies recurring errors, detects patterns, and generates Excel/CSV/PNG/Markdown reports. Strong log analysis, regex, pandas, YAML, cron, permissions/ACLs, and incident problem-solving. Comfortable with on-call support, cross-team communication, and daily tools like ServiceNow, Microsoft 365, Citrix, PuTTY, WinSCP, and MOVEit.

Experience

Capgemini : Application Support Engineer (Client: Royal Mail Group)

Oct 2024 – Present

- Manage daily production workflows involving **PULL → MOVE → PUSH** file-transfer cycles across Linux servers using **GoAnywhere MFT, FMS, and FTG**, including log-based diagnosis, SQL-based validation, and coordination with multiple tech teams to restore services within SLA during peak-season load.
 - Improved alert quality by creating a **standardized error taxonomy**, fixing misaligned cron schedules, adding **file-pattern validations**, and performing **outbound directory housekeeping** for decommissioned or misconfigured partners.
 - Authored clear and reusable **SOPs, KB articles, and troubleshooting runbooks** covering permission denials, workspace/process locks, mismatched file masks, stale or stuck directory scenarios, SFTP connectivity issues, and configuration gaps.
 - Own end-to-end **ServiceNow Incident, Change, and Problem Management**, support the on-call rotation, and prepare CAB documentation with complete impact and risk assessments.
- SELECTED WINS
- **Resolved a high-frequency stuck-file issue** by identifying an incorrect file pattern (PREDES_414D* → PREDES_000034*) and implementing a **housekeeping/quarantine mechanism** for unexpected inbound patterns — preventing pipeline blockage and improving flow stability.
 - Reduced investigation time for daily P1/P2 tickets by building **Snow Incident AI**, a Python/Streamlit tool that auto-analyses ServiceNow incidents and highlights recurring issues by **interface, file path, error category, and hour-of-day**, enabling faster RCA and operational forecasting.

Celebal Technologies : Junior Cloud Engineer Intern

July 2023 – Aug 2023

- Built foundational skills in **cloud infrastructure, virtualization, networking (TCP/UDP, OSI model), IAM, and system design** through hands-on labs and shadowing senior engineers.
- Gained exposure to cloud-native components including **API Gateways, Load Balancers, Storage Accounts/Buckets, VMs, and Monitoring tools** used in modern distributed architectures.
- Assisted in backend support activities such as **configuring test environments, validating API responses, reviewing logs, and performing basic debugging** under supervision.
- Practiced **system monitoring and health checks** in a simulated enterprise environment, learning how to identify latency issues, connectivity failures, and access misconfigurations.
- Supported small cloud deployment exercises, improving understanding of how applications are **deployed, scaled, secured, and maintained** on cloud platforms.

KEY INITIATIVES & PROJECTS

➤ **Snow Incident AI — Python + Streamlit (Self-Initiated Analytics Platform)**

- Designed and built a config driven analytics tool that processes ~2 years of ServiceNow incidents to identify recurring patterns and operational hotspots.
- Enriched incident data with interface IDs, error **families (FMS/FTP/Process alerts)**, POSIX paths, time grain features, and CI taxonomy for high quality insights.
- Implemented scenario partitioning (**stuck files, FTP errors, config issues, file remove failures, callouts, process alerts,**

- warnings**, misc) with 24 hour recurrence detection. Delivered multi format outputs: Excel (master analytics), CSV matrices (CI × error family), PNG charts (monthly trends, Pareto, DOW, hourly heatmaps), and Markdown/JSON summaries.
 - Enabled leads to quickly identify noisy interfaces, peak failure hours, and CI misclassifications, reducing daily triage time for the team.
- Enabled leads to **quickly identify noisy interfaces, peak-failure hours, and CI misclassifications**, reducing daily triage time for the team.
- **Recurring Error Catalogue — Central Operational Knowledge Base**
 - Built a structured knowledge repository that standardizes triage for daily FMS/FTG alerts.
 - Documented **interface-wise recurring issues**, including category, root cause, resolution/no-action, criticality, frequency, ownership, and business impact.
 - Reduced repetitive investigations by providing **consistent, reference-ready RCA summaries** for on-call engineers.
 - Enabled faster, more accurate ticket closures and reduced noise from predictable/benign issues.
- **GoAnywhere “Permission Denied” (MFERR03) — SOP & Alert Noise Reduction**
 - Created a comprehensive SOP and noise-suppression strategy for repeated GoAnywhere permission-denied alerts across **Print Flow data, Print Filenames, and Print FileTrack** pipelines.
 - Analyzed transient workspace/contention issues such as **log-write conflicts, Azure Files concurrency locks, and shared workspace blocking**; confirmed all were logging-only failures with successful transfers.
 - Recommended technical improvements:
 - Switch to **echo-based non-blocking logging**
 - Enable **duplicate-event suppression (NE/WE de-dup)**
 - Auto-resolve conditions for transient workspace locks
 - Reduced unnecessary escalations and minimized false-positive alerts from MFERR03

CORE SKILLS

- **MFT & Linux** : GoAnywhere MFT (Projects, Monitors, Schedulers, Triggers, Completed Jobs), SSH/SFTP/SCP, POSIX paths, Linux file permissions/ACLs, namei traversal, setfacl, workspace directories, cron scheduling.
- **Ops & ITIL**: ServiceNow (Incident / Problem / Change), SLA adherence, MTTR/MTTD improvement, RCA, runbooks, SOPs, KB documentation, on-call / 24×7 support, CAB participation.
- **Automation & Data**: Bash scripting, Python (pandas, regex), Streamlit dashboards, YAML configuration, Excel-based analytics, CSV/JSON/Markdown reporting.
- **Diagnostics & Observability** : Log analysis, pattern detection, stuck-file triage, permission-denied debugging, pattern-guard logic, recurrence pair detection, CI × error-family matrices, Pareto charts, DOW/hour heatmaps.
- **DevOps Tooling**: Azure DevOps (Repos / PRs / Pipelines), Jenkins, Git/Bitbucket, Confluence, Jira.
- **Familiar & Daily Tools**: SQL for triage, basic Azure/AWS, REST/JSON, Postman, ServiceNow, Microsoft 365 (Excel/Outlook/Teams), Citrix, PuTTY, WinSCP, MOVEit, Postman. Logging,ELK(**Elasticsearch + Logstash + Kibana**)

Education

Centre for Development of Advanced Computing (CDAC), Bangalore

Mar 2024 – Aug 2024

Postgraduate Diploma in Advanced Computing (DAC)

Poornima Institute of Engineering and Technology, Jaipur

Aug 2019 – May 2023

B.Tech in Computer Science & Engineering

CGPA: 7.29/ 10

Certifications

- **Azure AI Engineer Associate (AI-102)**
- **Azure AI Fundamentals:** [View Certificate](#)
- **AWS Generative AI:** [View Certificate](#)
- **React-Redux:** [View Certificate](#)
